Work Experience

Senior Full Stack Developer May 2023 – March 2026 (3 Years)
Pixolo Technologies *Mumbai, India*

- **Led EightyDays Frontend, AI Streaming & Caching (50k+ Downloads):** Built the frontend from scratch and a feature that extracts places from text, articles, and YouTube links, cutting time-to-first-content by **95% (50–60s to 2–3s)** via live streaming. Built a Redis caching layer for popular destination searches (e.g., Goa, Manali) and optimized queries for read-heavy itinerary feeds, collaborative trips, and map exploration.
- **Delivered Large-Scale Systems for Reliance Digital & Bajaj:** Built high-throughput portals processing **230k+ registrations** and an offline-first kiosk platform handling **1,500+ check-ins in 48 hours** without network connectivity, storing check-ins in local SQLite, queuing them offline, and syncing to the central database through a dedicated sync page once connectivity returned.
- **Built Enterprise APIs & Microservices:** Developed **Node.js, Express.js, Nest.js, PostgreSQL, and MySQL** services for internal HRM and deployment platforms, with RBAC, automated onboarding, leave tracking, and S3 uploads.
- **Optimized Performance & Shipped Cross-Platform Apps:** Raised Lighthouse scores from **60 to 90+** and cut page load latency by **30%** via code splitting, SSR, and edge caching. Shipped Next.js dashboards and the **Pango Nutrition** app (1k+ downloads) on Android and iOS.
- **Standardized Developer Tooling:** Created a Storybook/Next.js component library and a multi-DB Express boilerplate (MongoDB, PostgreSQL, MySQL), reducing setup and feature turnaround time by **30–50%**.
- **Technical Leadership & AI Workflows:** Mentored junior developers through code reviews and used **Claude Code and Cursor** to speed up delivery while keeping architecture clean.

Projects

Tokeno – Design Token Automation Platform | *TypeScript, Figma Plugin API, SCSS* Figma Community

- Published an open-source Figma plugin adopted by **500+ developers and designers** that exports design tokens as production-ready TypeScript, CSS, and SCSS variables, with semantic token mapping and multi-theme export.

LeetGit – LeetCode to GitHub Sync | *JS, Chrome Extension (MV3), GitHub API, GraphQL* GitHub

- Built a Manifest V3 Chrome extension that detects accepted LeetCode submissions and commits the problem statement, stats, and code to GitHub in real time, using GitHub OAuth Device Flow with no backend.
- Engineered a resumable bulk-sync engine that paginates LeetCode's GraphQL API, deduplicates attempts, and commits in throttled batches to avoid GitHub secondary rate limits, saving per-problem progress in `chrome.storage.local`.

Technical Skills

Languages: TypeScript, JavaScript, SQL
Frontend: Next.js, React, React Native, Angular, Redux Toolkit, Tailwind CSS, Storybook
Backend & Cloud: Node.js, Express.js, Nest.js, REST APIs, PostgreSQL, MySQL, MongoDB, SQLite, Redis, Docker, AWS, Vercel
Architecture & Tools: System Design, Microservices, Offline-First Sync, RBAC, Git, Figma Plugin API, Cursor, Claude Code

Education

Bachelor of Information Technology 2018 – 2021
Mumbai University *Mumbai, India*
